PROFESSIONAL PROFILE

Full Stack & DevOps Developer with experience building modern and scalable applications. Skilled in backend and frontend development using Elixir, Node.js, C#, React, and TypeScript. Experienced with CI/CD pipelines, cloud infrastructure (AWS and GCP), Docker containers, and Kubernetes orchestration. Currently pursuing a degree in Computer Science and continuously seeking improvement by combining clean code with automation and performance practices.

PROFESSIONAL CAREER

Swap, São Paulo.

Full Stack Developer • Sep 2025– current (Remote)

- Designed and built automation solutions and internal tooling as a Software Engineer, eliminating manual processes and generating direct value for the Data and AML (PLD) teams.
- Acted as GCP Project administering, securing, and architecting a wide range of Google Cloud services end to end.
- Developed and deployed data-driven features on Google Cloud Platform, supporting analytics and anti-money-laundering (AML/PLD) workflows.
- Built and maintained CI/CD pipelines and projects using GitLab (GitLab CI).
- Worked with Machine Learning, developing models and building AI agents to automate decisions and analysis.
- Collaborated closely with the Data and Compliance teams to deliver scalable, business-aligned solutions.

Árvore de Livros , Rio de Janeiro.

Junior Full Stack Developer • Jan 2025– Jul 2025 (Remote)

- Developed new features on the backend (Elixir and Node.js) and frontend (React and TypeScript)
- Built and maintained RESTful and GraphQL APIs, integrating external services
- Participated in technical decisions and contributed to architectural improvements
- Optimized and maintained MySQL and PostgreSQL databases
- Actively contributed to DevOps practices: created CI/CD pipelines using GitHub Actions, performed deployments with Docker and Kubernetes, and used AWS services (EC2, S3 RDS, CloudFront)
- Collaborated with multidisciplinary teams (product, QA, design) to ensure business-aligned deliveries
- Monitored performance and implemented best practices in security and scalability

Árvore de Livros , Rio de Janeiro.

TechnologyIntern(YoungApprentice)•Jan2024–Jan 2025 (Remote)

- Provided technical support by handling help desk tickets and solving simple technical issues
- Developed basic features in Elixir under team guidance
- Created internal dashboards for monitoring operational metrics
- Participated in team meetings and assisted in process documentation
- Helped organize tasks and implemented small routine automations
- Provided general support for continuous improvement initiatives in the technology department

TECHNICAL SKILLS

Backend Development:

- Elixir (Phoenix), Node.js (Nest.JS), and Python
- RESTful and GraphQL APIs
- External service integrations
- Data structures and performance best practices

Frontend Development:

- React, Angular, jQuery, Vite
- Tailwind CSS, Bootstrap, and custom CSS
- Responsive, reusable, and accessible interfaces
- API and external library integration

Software Architecture:

- MVC, well-structured Monoliths, and Microservices
- Separation of concerns and modular, scalable systems
- Modern software architecture practices

Cloud, DevOps, and Infrastructure:

- AWS and GCP
- Docker, Kubernetes, Terraform
- CI/CD with GitHub Actions
- Monitoring: Datadog, Argo, CloudWatch
- Linux: shell scripting, automation, configuration
- Version management with ASDF

Databases and Messaging:

- PostgreSQL, MySQL, Elasticsearch
- Messaging systems: RabbitMQ, Kafka, Redis, AWS SQS
- Query optimization and relational data modeling

Tools and Collaboration:

- Git (GitHub, GitLab), Jira, Slack, Notion
- Agile methodologies
- Strong communication with multidisciplinary teams

Professional Strengths:

- Analytical thinking and problem-solving
- Proactive and committed to continuous learning
- Adaptability and focus on business value
- Collaborative, remote-friendly, agile team player

IA tools

- Create intelligent agents using Large Language Models (LLMs).
- Integrate LLMs with external databases and systems.
- Develop and implement asynchronous communication protocols.
- Design conversational interfaces for user interactions.
- Troubleshoot and optimize agent functionalities.
